NetDMR

What is NetDMR?

NetDMR is a Web-based tool that allows NPDES permittees to electronically sign and submit their discharge monitoring reports (DMRs) to EPA's [Integrated Compliance Information System \(ICIS-NPDES\)](#) via the [Environmental Information Exchange Network](#). NetDMR is designed to reduce the burden on EPA, states, and the regulated community; improve data quality; provide a cost savings; and expand the ability of both states and EPA in targeting their limited resources to meet environmental goals. An essential component of NetDMR is the exchange of data with ICIS-NPDES allowing permittees to complete a DMR that is specific to their permit limits and outfalls.

Catch the Wave

What are the Region 6 plans for NetDMR Implementation?

Region 6 will implement NetDMR in a phased approach beginning in January 2010. Offshore Operators with a submittal date in April 2010 or July 2010 are invited to attend NetDMR Permittee and Data Provider training that will be held by Webinar on February 2, 4 and 9, 2010. We recommend that you attend all three training sessions. Upon completion of NetDMR training, permittees will be able to log on to the NetDMR Test database and allow staff to try different roles and responsibilities, perform direct DMR entry or importing DMR data, and signing forms. After one or more successful transmissions of DMR data, you can create your account, submit the signed Subscriber Agreement to Region 6, get approval for Signatory and Permit Administrator authority, and go "live" in time for your DMR submittal in April or July 2010. Future trainings will be held for permittees that submit data during the months of October and January.
